AuditTrail Trader - Marketing Strategy Document

1. Ideal Customer Profile (ICP)

Primary: Intermediate-to-advanced crypto traders who already run bots or scripts and have been burned by runaway losses from uncontrolled automation. They understand risk management conceptually but lack tooling to enforce it mechanically.

Secondary: Crypto developers and quant hobbyists building on OKX or similar exchanges who want a compliant, auditable agent they can demo or extend.

Signals they're a fit:

- Uses or has evaluated 3Commas, Cryptohopper, or Pionex
- Talks about drawdown, position sizing, or "blowing up an account" in forums
- Active on crypto Twitter/X, Reddit (r/algotrading, r/CryptoCurrency), or Discord trading servers
- Values transparency - asks "why did my bot do that?"

2. Positioning Statement

For crypto traders and developers who automate their trading, **AuditTrail Trader** is the only autonomous trading agent that enforces hard risk limits the trading logic itself cannot override - so you stay in control even when the bot is running. **Unlike** 3Commas or Cryptohopper, every signal, risk decision, and execution is logged to an immutable audit trail, giving you full accountability without manual oversight.

3. Messaging Framework

Layer	Message
Headline	Automate your trades. Never lose control of your risk.
Sub-headline	

	A trading agent with a built-in risk engine it cannot override - with every decision logged.
Pain addressed	"My bot kept trading past my loss limit and I couldn't see why."
Core proof points	Hard-coded risk engine (not a soft setting), immutable audit trail, dry-run mode, real-time risk dashboard
Trust signal	On-chain decision log with timestamps and tx hashes - verifiable, not just a UI number
CTA	Run Trading Cycle (free, dry-run, no real trades)

Tone: Direct, technical, credible. Avoid hype. Speak to traders who've been hurt by uncontrolled bots before.

4. Channel Prioritization Report

Rank	Channel	Rationale
1	**Reddit** (r/algotrading, r/CryptoCurrency, r/BitcoinMarkets)	High-intent audience actively discussing bot failures and risk management. Organic posts with genuine value perform well. Zero cost.
2	**Crypto Twitter/X**	Where traders and devs discover new tools. Short demo clips of the audit trail or dry-run mode can drive clicks. OKX AI Agent integration is a natural hook for the builder community.
3	**Product Hunt**	One-time launch spike. Strong for developer/early-adopter segment. Drives backlinks and initial credibility.
4	**YouTube / Loom demos**	A 3-5 min walkthrough of dry-run mode + audit trail addresses

		the "how does it actually work?" objection. Evergreen traffic.
5	**Discord / Telegram communities**	Targeted drops in algo trading and OKX-focused servers. High noise but high relevance when done right.
6	**SEO / Blog**	Longer-term play. Articles like "How to prevent crypto bot losses" or "What is a trading audit trail" can capture search intent. Low priority in month one.

5. 30-Day Roadmap

Week 1 - Foundation

- [ ] Write 3 Reddit posts: one explaining the risk engine concept, one sharing a dry-run walkthrough, one asking for feedback on audit trail UX
- [ ] Record a 3-minute Loom/screen-capture demo showing a full dry-run cycle with audit trail output
- [ ] Set up a Twitter/X account if not live; post the demo clip with a thread explaining the "risk engine it cannot override" concept
- [ ] Finalize Product Hunt listing copy, screenshots, and maker profile

Week 2 - Launch Push

- [ ] Launch on Product Hunt (Tuesday or Wednesday for best visibility)
- [ ] Cross-post launch to relevant Reddit threads and Discord servers on launch day
- [ ] Engage every comment on Product Hunt and Reddit personally - answer technical questions in detail
- [ ] Post a Twitter/X thread: "Why I built a risk engine that the trading bot can't override" - founder story angle

Week 3 - Community & Feedback

- [ ] Identify 5-10 active algo trading Discord servers; share the tool with a dry-run invite, not a sales pitch
- [ ] DM 10 crypto developers or traders on Twitter/X who have posted about bot losses or risk management
- [ ] Collect feedback on the biggest friction points (onboarding, risk parameter setup, audit trail readability)
- [ ] Publish one short blog post or Twitter thread: "What an immutable trading audit trail actually looks like"

Week 4 - Iterate & Double Down

- [ ] Act on top feedback items - even small UX fixes signal responsiveness to early users
- [ ] Repost best-performing Reddit/Twitter content in new communities with slight variations
- [ ] Begin one SEO-targeted article draft: "How to set hard risk limits for a crypto trading bot"
- [ ] Review traffic and sign-up data; double down on the one channel driving the most qualified visits

---

Total estimated weekly time investment: 6-8 hours for a solo founder or small team.
